

Codes used during recensus at SCBI

code	when to use	where recorded	notes
A	alternate POM (point of measurement, different than 1.3m)	codes column	
B	stem broken above 1.3 m	codes column	
C	dead above 1.3m	codes column	
F	inside deer fence	codes column	
G	ID to Genus certain	codes column	
I	stem irregular where measured	codes column	
J	bent	codes column	
L	leaning stem	codes column	
M	multiple stem plant	codes column	
main	main stem	codes column	
P	prostrate stem (almost parallel to the ground)	codes column	
S	secondary stem	codes column	
TR	tag removed	codes column	
WR	wire removed	codes column	
X	stem broken below 1.3 m.	codes column	
DS*	dead, stem standing	codes column	see note below
DC	dead, stem fallen	codes column	
DT	dead, only tag found	codes column	
DN**	presumed dead, no tag nor stem	codes column	see note below

About dead stems:

*in recensus 2018 we measured DBH in some DS stems: a) if bark was complete all the way around the stem DBH was measured, b) if bark was incomplete we entered 0 (zero) in DBH.

**in recensus 2018, DN means stem completely disintegrated; no stem at all or stem found with visible decay.
